Overview of Clinical Pharmacology

Clinical pharmacologists work toward rational, evidence-based, cost-effective use of drugs in four domains:

1. Clinical medicine: clinical consultation, clinical toxicology, therapeutic drug monitoring, pharmacogenetics and, often, hospital practice in a second specialty
2. Policy and governance: including drug regulation, serving on national and local committees
3. Research: both within the discipline and in supporting and advising other disciplines on research related to medicines
4. Education: undergraduate and post-graduate.

Specialty training

Physician training is undertaken through the Royal Australasian College of Physicians (RACP) and consists of:

- a minimum of 36 months of Adult Medicine or Paediatric and Child Health Basic Training followed by
- a minimum of 36 months of Advanced Training in Clinical Pharmacology
- work-based learning and assessment requirements.

Trainees may apply to enter the Advanced Training programme if they:

- have completed Adult Medicine or Paediatric and Child Health Basic Training programme
- have successfully completed the RACP Clinical and Written Examinations
- hold current medical registration and
- secured an accredited training position.

All advanced training occurs in supervised clinical placements within RACP accredited sites.

Over the course of the training programme, all trainees must carry out a variety of teaching and learning activities, including work-based learning and assessment requirements, and other programme requirements in consultation with their supervisors.

Once the training is satisfactorily completed, Fellowship of the RACP (FRACP) is awarded.

It is likely that you need to complete placements in multiple DHBs whilst completing vocational training.
Personal qualities required to be a Clinical Pharmacologist

- Ability to co-operate with colleagues in a wide range of clinical and non-clinical disciplines
- An interest in therapeutics
- A desire to carry out drug related research
- Knowledge of statistics and a good grasp of the methods used to evaluate evidence in medicine
- fostering of a patient-centred approach to health care
- maintenance of a balanced and broad perspective on health care delivery
- preparedness to learn and adopt new and validated approaches to diagnosis and management, despite logistical difficulties, and to change work practices when appropriate
- willingness to reflect on, and learn from, mistakes
- preparedness to change management plans
- tolerance of uncertainty
- ability to cope with unexpected disappointments, equanimity, resiliency and calmness in the face of challenging clinical demands
- desire to contribute to improvements in the health system
- desire to foster clinical practice, research and teaching in general internal medicine
- preparedness to acknowledge doubt and uncertainty in clinical practice.
