Overview of Medical Oncology

Most medical oncologists undertake a mix of clinical and research activities. Clinical work covers the diagnosis and systemic management of cancer. Research opportunities include basic oncology research, clinical trials and other clinical research, cancer epidemiology, pharmacology, and hereditary cancer.

Medical oncologists work as an integral part of multidisciplinary teams to provide holistic, multimodality care to patients with cancer. The specialty requires a breadth of clinical experience and skills in caring for acute medical problems and chronic illness, patients’ and families’ emotional needs, symptom control, and end-of-life care.

Specialty training

Physician training is undertaken through the Royal Australasian College of Physicians (RACP) and consists of:
- a minimum of 36 months of Adult Medicine or Paediatric or Child Health Basic Training followed by
- a minimum of 36 months of Advanced Training in medical oncology.

Trainees may apply to enter the Advanced Training programme if they:
- have completed Adult Medicine or Paediatric or Child Health Basic Training
- have successfully completed the College’s Clinical and Written Examinations
- hold current medical registration and
- secured an accredited training position.

All advanced training occurs in supervised clinical placements within RACP accredited sites.

Over the course of the training programme, all trainees must carry out a variety of teaching and learning activities, assessments and other programme requirements in consultation with their supervisors.

Once the training is completed, Fellowship of the RACP (FRACP) is awarded.

It is certain that you need to complete placements in multiple DHBs whilst completing vocational training.
Personal qualities required to be a Medical Oncology Specialist

- fostering of a patient-centred approach to health care
- maintenance of a balanced and broad perspective on health care delivery
- preparedness to learn and adopt new and validated approaches to diagnosis and management, despite logistical difficulties, and to change work practices when appropriate
- willingness to reflect on, and learn from, mistakes
- preparedness to change management plans
- tolerance of uncertainty
- ability to cope with unexpected disappointments, equanimity, resiliency and calmness in the face of challenging clinical demands
- desire to contribute to improvements in the health system
- desire to foster clinical practice, research and teaching in general internal medicine
- preparedness to acknowledge doubt and uncertainty in clinical practice.
